

Tourism Employment: Analysis and Planning (Aspects of Tourism)

This book is an attempt to understand tourism employment in a holistic way. Using ideas from labour economics, work psychology and industrial sociology the authors look at tourism employment in both its workplace context and its wider economic and social environment and attempt to tell a coherent story. Both behavioural and economic perspectives are used to address questions that are salient to manpower planning, education planning and tourism management. By examining the diversity and commonality within occupations against the background of a dynamic labour market the text develops themes that contribute to our understanding of the behaviour of workers and managers in the industry.
