

## Fluid Mixing 5 (Symposium Series 140) - IChemE (Symposium Series 140)

Great changes have taken place in the study of mixing in the fifteen years since the first Mixing conference in the series. The gap between theoretical predictions and experimental data is closing. Increased computer power makes computational fluid dynamics (CFD) analyses possible and new imaging techniques illuminate mixing flows. IChemE, the Institution of Chemical Engineers, is the center for chemical, biochemical and process engineering professionals worldwide. We are the heart of the process community, promoting competence and a commitment to sustainable development, advancing the discipline for the benefit of society and supporting the professional development of members. Some of the areas we publish in include: -Safety in the process industries - the BP Process Safety series-Consultancy for chemical engineers-Project management in the process industries-Contract management in the process industries - International Forms Of Contract series-Communication skills for engineers
